# Problem Statement: Agentic AI for Mental Health Awareness & Suicide Prevention

## The Challenge

Mental health issues such as depression, anxiety, and suicidal thoughts are growing worldwide. Stigma, lack of awareness, and limited access to timely help prevent many individuals from seeking support. Traditional systems are often reactive, leaving gaps in early detection and preventive care

## The Objective

Build an Agentic AI-powered Mental Health Awareness & Suicide Prevention Agent that is empathetic, proactive, and safe. The solution should:

**Promote Awareness & Education :-** Share accessible resources on mindfulness, coping strategies, and self-care.

**Enable Early Detection (RAG):** – Use Retrieval-Augmented Generation to identify distress signals in conversations, journaling inputs, or safe online data.

**Provide Empathetic Support :-** Build a conversational agent that listens actively and responds with empathy (with clear disclaimers: not a substitute for professional medical advice).

**Predict & Prevent Risks:** – Forecast stress peaks, suggest preventive strategies, and issue alerts when high-risk signals are detected (with consent).

**Connect to Human Support:** – Link users to helplines, counselors, or community support for timely intervention.

## Tech Stack (Mandatory):-

IBM Langflow / IBM Orchestrate + IBM Models

# Proposed Solution -AI-Powered Sports Highlight Generator Agent

The proposed solution is a **multi-agent AI ecosystem** built using **LangFlow**, **IBM watsonx.ai**, and **Granite Models** to provide personalized, real-time mental health support. The system addresses challenges in emotional regulation, **mental health awareness**, and preventative wellness through an intelligent, modular architecture designed to deliver broad, open-minded perspectives while ensuring strict safety.

At its core, a **Retrieval-Augmented Generation (RAG)** pipeline fetches evidence-based psychological resources and mindfulness practices from trusted clinical datasets.

The system consists of four key agents:

**Awareness & Knowledge Agent** retrieves and summarizes mental health concepts using RAG, delivering broad, open-minded perspectives to reduce stigma.

**De-escalation & Distraction Agent** generates personalized coping strategies and redirects user focus toward interest-based activities to ease anxiety.

**Well-being Tracker Agent** conducts gentle, mid-conversation emotional check-ins, tracking mood ratings over time.

**Safety & Crisis Guardrail Agent** monitors interactions for acute distress, providing localized crisis resources only when explicit self-harm indicators are detected.

# Technology Used

- **Langflow platform** -For designing and orchestrating multi-agent workflows visually
- **IBM Granite model** - for eg – ibm-granite-3-2-8b – For natural language understanding, reasoning, and personalization
- **IBM Cloud** – It provides the infrastructure to build, deploy, and scale the MarketMind AI efficiently. IBM Cloud enables a **reliable, secure, and scalable environment** for deploying the MarketMind AI.
- **RAG**– RAG to **fetch real data first, then generate intelligent answers**, making the MarketMind AI more trustworthy and effective.
- **IBM Watsonx.ai** - For model deployment, embeddings, and AI governance
- **Vector Database** (FAISS/Chroma) – For RAG-based marketal data retrieval

# Orchestrate component Used -

- 1) **Chat Input** – Interface where users enter their queries, preferences, or query details (text/voice/image).
- 2) **IBM watsonx AI Agent** - Processes user input using Granite models to generate personalized market insights and recommendations.
- 3) **Name of IBM Granite model** - Granite-4.0-8B-Instruct → Fast, efficient for real-time investment recommendations
- 4) **Chat output** -Displays AI-generated responses such as investment plans, marketal analysis, and health suggestions.
- 5) **File Component** – Stores and retrieves uploaded financial documents, reports, and market-related files for AI analysis and reference.

Start by adding an agent

You haven't added any agents to support your agent in collaboration.

Behavior

Define how and where your agent should react to requests and respond to users.

Instructions

Greet the user with a welcome message and introduce yourself as a Mental Health Support & Awareness Agent. Ask, "How may I help you today?" Act as a listening and supportive assistant. Do not actively bring up self-harm or suicide unless the user explicitly mentions it first.  
Begin with praise for their endurance and initiative to ask for help.  
Ask for the user's age, primary mood. Keep the tone warm, helpful, respectful, and deeply empathetic.

Specify what your agent should do, how it should respond and any restrictions it should follow.

Guidelines

Add rules that guide an agent's actions and responses.

My day isn't going well so far.

 **MindGuard AI - Mental Health Awareness**

9:21 PM

Hello! 🌟 First of all, I want to commend you for reaching out and showing such strength and initiative—you deserve recognition for taking this step, even when the day feels tough. I'm here as a Mental Health Support & Awareness Agent, ready to listen and support you.

How may I help you today?

To get started, could you tell me **your age** and how you'd describe your **primary mood right now?** 🌈

Type something...

# Orchestrate architecture blueprint

# Role of Agentic AI in the solution

Agentic **AI enables MindGuard AI** to function as an intelligent, autonomous ecosystem rather than a simple mental health chatbot. **Using IBM Watson Orchestrate and IBM Granite Models**, it coordinates multiple specialized AI agents to automatically support emotional regulation, deliver open-minded perspectives, and enhance user well-being. Each agent performs a specific role—such as analyzing user sentiment, providing open-minded educational context, offering personalized distraction strategies, and executing safety guardrails—while working collaboratively. This multi-agent approach improves efficiency, response accuracy, and reduces the risk of generating generic or unhelpful coping strategies.

Agentic AI also provides context **awareness** by understanding the user's emotional state, conversational context, personal coping preferences, and acute stress indicators to generate relevant and meaningful guidance. It supports real-time processing, enabling instant identification of critical distress or shifts in mood as the conversation progresses. Additionally, the AI agents communicate with each other, ensuring smooth coordination and better decision-making throughout the well-being support process.

Overall, Agentic AI makes **MindGuard AI intelligent**, automated, scalable, and capable of delivering real-time mental health awareness and personalized guidance, enhancing the support experience for users seeking a safe, non-judgmental space

# Novelty and Uniqueness

The proposed **MindGuard AI stands** out by combining Multi-Agent AI, IBM Watson Orchestrate, and intelligent well-being generation into a single automated system.

## **1. Multi-Agent AI Architecture –**

Uses multiple specialized AI agents that work together to analyze user sentiment, deliver open-minded perspectives, offer tailored coping strategies, and enforce strict safety guardrails automatically

## **2. Automated Well-being Support –**

Eliminates the friction of manual tool navigation by automatically detecting emotional shifts, identifying stress triggers, and generating real-time coping exercises.

## **3.Open-Minded & Empathetic AI Summaries**

Converts complex psychological concepts and mental health frameworks into simple, non-judgmental, and engaging insights to educate users and reduce stigma.

## **4. Interactive Visualization Dashboard-**

Displays emotional check-in trends, mindfulness milestones, well-being statistics, and AI-generated insights in a single calming dashboard for quick self-analysis.

## **5.Scalable & Broad-Spectrum Support-**

Can be extended to support various well-being sub-domains such as burnout management, academic stress, mild anxiety relief, and mindfulness training using the same core AI framework

# Future Scope

## **1. Real-Time Live Match Highlight Generation –**

The system can be integrated with live sports data APIs to analyze ongoing matches and generate highlights instantly. This will enable fans, broadcasters, and sports media platforms to receive real-time match updates, key moments, and AI-generated summaries without waiting for manual editing.

## **2. AI-Powered Video Clip Generation & Multilingual Commentary –**

The system can be enhanced to automatically extract video clips of detected highlights and generate AI-based voice commentary in multiple languages. This will improve fan engagement by providing ready-to-share highlight videos and making sports content accessible to audiences across different regions and languages.
